Assigner App

Developer: Jesse Williams

Overview

My current employer uses an application called Navigator to house the files worked by its employees that evenly distributes the work to the employees by department. However,there are legacy systems that were not integrated into this application.

This application was created as a solution to this problem. It is a an assignment tool that allows the user to evenly distribute files to employees by selected departments.

Tech

Java

Spring

Thymeleaf

SQL

Hibernate

Html/Css/Bootstrap

Features

Users will be able to register for an account and sign in to the application using a secure login

Once user is logged into the application, they will be able to create new departments, add employees to the departments, and assign files to the employees by department

Users will also be able to display a list of employees, departments, and files assigned
